Staff Endpoint & Platform Engineer | Intune, Autopilot, SCCM Modernization | Cloud Transition Specialist

SUMMARY

Staff-level Endpoint & Platform Engineer with 15+ years of experience designing and executing Microsoft endpoint management strategies, including SCCM (MECM) to Intune migrations, Autopilot deployment, and cloud-native endpoint architecture with Entra ID.

Specializes in modernizing legacy environments, translating Group Policy to Intune, and building scalable, secure endpoint platforms that reduce operational overhead and long-term risk.

Combines hands-on engineering depth with architectural ownership, leading migration initiatives end-to-end while producing clear documentation and enabling internal teams to operate independently post-implementation.

CORE COMPETENCIES

- Intune (Endpoint Manager) Architecture & Implementation
- Microsoft Autopilot (ESP, OOBE, lifecycle provisioning)
- SCCM / MECM to Intune Migration Strategy
- Entra ID (Azure AD) & Cloud Identity Integration
- Group Policy (GPO) to Intune Configuration Translation
- Endpoint Security: BitLocker, LAPS, Defender
- PowerShell Automation & Win32 App Packaging
- Endpoint Lifecycle Engineering
- Documentation & Knowledge Transfer

PROFESSIONAL EXPERIENCE

LEIDOS – Endpoint Platforms Engineer (Mar 2022 – Feb 2026)

- Aligned MECM-based environments with cloud-first Intune architecture
- Designed and implemented PowerShell-based automation frameworks, improving **deployment consistency and code reuse by ~70%** across distributed environments
- Reduced complex deployment scripting from ~800 lines to ~60 lines (**~92% reduction**), improving maintainability and enabling reusable, modular workflows
- Collaborated with identity/security teams on Entra ID alignment
- Built structured logging and diagnostics frameworks, significantly improving **troubleshooting speed and post-deployment validation at scale**

BROOME COUNTY – Endpoint / Platform Engineer (May 2016 – Mar 2022)

- Led design and implementation of Intune + Autopilot-based provisioning, reducing deployment time by **80%+ (days → hours)** and eliminating on-site IT dependency
- Designed custom Autopilot Wizards for LTI deployment, reducing provisioning time by 80%
- Transformed deployment infrastructure, reducing **Active Directory query times by ~95% (30-60s → <1s)** and cutting task sequence maintenance by ~40%
- Supported co-managed SCCM/Intune transition to cloud-only
- Translated GPOs into Intune policies and PowerShell controls
- Engineered cloud-native LAPS solution, eliminating **100% of shared local admin passwords** and significantly improving security posture
- Integrated endpoint workflows with Entra ID and Azure services
- Built automation and tooling that reduced manual intervention and **long-term operational overhead across endpoint lifecycle management**

FORWARD BUSINESS SOLUTIONS – IT Consultant (Contract) – Microsoft Deployment & Infrastructure Engineering (Jan 2012 – May 2016)

- Engineered multi-tier MDT architecture that reduced deployment errors by **~40%**, accelerated patching by **~60%**, and eliminated reliance on manual imaging workflows

LOCKHEED MARTIN INFORMATION TECHNOLOGY - IT Consultant, Microsoft Deployment (2006 – Jan 2012)

- Designed and implemented automated application deployment system that reduced helpdesk tickets by **~80%** and generated **\$15M+ in annual savings**

- Improved engineering standards and automation practices, reducing bugs by **50–60%** and maintenance overhead by **~80%**
- Developed tooling that reduced troubleshooting/support time by **~70%** across thousands of endpoints

SELECTED IMPACT

- Reduced provisioning time by 80%+
- Eliminated shared local admin credentials
- Improved deployment consistency with automation frameworks
- Enabled fully remote endpoint lifecycle management
- Created robust reusable tools to build stable long term processes
