Staff Platform & Infrastructure Engineer

SUMMARY

Staff-level Platform & Infrastructure Engineer with 15+ years of experience designing, building, and sustaining reliable endpoint and deployment systems in enterprise environments. Specializes in automation, system design, and creating deterministic, maintainable platforms that reduce operational complexity and long-term risk.

Combines deep hands-on engineering with a focus on scalability, traceability, and long-term operability. Proven track record of transforming fragile, manual processes into stable, reusable systems that support both technical teams and business operations.

CORE COMPETENCIES

Platform & Endpoint Engineering: Endpoint lifecycle management, provisioning systems, deployment pipelines, system standardization

Automation & Tooling: PowerShell, modular scripting, reusable frameworks, process automation

Identity & Security: Directory services, access control, credential management, secure configuration

Systems Design & Reliability: Observability, logging, diagnostics, deterministic behavior, maintainability

Technologies: Windows Server, Active Directory, Entra ID, MECM/SCCM, Intune, Azure

PROFESSIONAL EXPERIENCE

LEIDOS – Endpoint Platforms Engineer (Mar 2022 – Feb 2026)

- Designed and sustained enterprise-scale endpoint platforms emphasizing reliability, predictability, and long-term operability
- Built reusable automation frameworks, improving system consistency and reducing operational complexity by ~70%
- Reduced complex deployment scripting by ~92% on average, improving maintainability and reuse
- Developed structured logging and diagnostics systems, significantly improving traceability and troubleshooting
- Collaborated with identity and infrastructure teams to align endpoint systems with authentication and security models

BROOME COUNTY – Endpoint / Platform Engineer (May 2016 – Mar 2022)

- Designed and implemented automated provisioning systems, reducing deployment time by 80%+ (days → hours)

- Transformed deployment infrastructure, reducing Active Directory query times by ~95% and improving system performance
- Built automation and tooling that reduced manual intervention and improved long-term maintainability across endpoint lifecycle
- Engineered secure credential management solution eliminating 100% of shared local administrator passwords
- Integrated endpoint systems with cloud and identity platforms to support hybrid and remote environments

FORWARD BUSINESS SOLUTIONS – IT Consultant (Jan 2012 – May 2016)

- Engineered deployment architectures reducing errors by ~40% and improving patching speed by ~60%
- Replaced manual imaging processes with repeatable, automated build pipelines

LOCKHEED MARTIN INFORMATION TECHNOLOGY – IT Consultant (2006 – Jan 2012)

- Designed automated deployment system reducing support load by ~80% and generating \$15M+ annual savings
- Improved engineering standards, reducing bugs by 50–60% and maintenance overhead by ~80%
- Built tools that reduced troubleshooting time by ~70% across thousands of systems

SELECTED IMPACT

- Reduced provisioning time by 80%+
- Eliminated shared local administrator credentials
- Improved system consistency through automation frameworks
- Enabled fully remote endpoint lifecycle management
- Built reusable systems supporting long-term operational stability
